

What is claimed is:

1. A tub cover of an automatic washing machine comprising a washing water
5 guide means formed in a lower tub cover so as to provide washing water pumped
between an inner tub and an outer tub according to a centrifugal force by a high speed
rotation of the inner tub.

2. The tub cover of an automatic washing machine as claimed in claim 1,
10 wherein the washing water guide means comprising;

a regular direction guide means formed in a guide rib of the lower tub cover for
guiding the washing water between the inner and outer tubs during a regular direction
rotation of the inner tub, and

a reverse direction guide means formed in the guide rib of the lower tub cover
15 for guiding the washing water between the inner and outer tubs during a reverse
direction rotation of the inner tub.

3. The tub cover of an automatic washing machine as claimed in claim 1,
wherein the regular and reverse direction guide means are formed in "人" shape.

20

4. The tub cover of an automatic washing machine as claimed in claim 2, further
comprising a curved portion connecting the regular direction guide means to the reverse
direction guide means so as to provide the washing water guided by the regular and
reverse direction guide means in the same direction as the rotation direction of the inner

tub.

5. The tub cover of an automatic washing machine as claimed in claim 2,
wherein the guide rib extends to fore ends of lower and upper tub covers for guiding the
5 washing water to a discharge hole formed by the lower and upper tub covers.

6. The tub cover of an automatic washing machine as claimed in claim 2,
wherein the guide rib extends to the center portion of a passage of the lower and upper
tub covers so as to guide the washing water to the center portion of the passage formed
10 by the lower and upper tub covers, mix and provide the same.
